Environmental policy

Sustainability and the sustainable development goals also fill a modern Art Center.

The Silkeborg Bad Art Center wants to run an art and cultural institution that is strongly and soundly founded on green and sustainable values.

Although we have not shown much about it so far, we have long focused on adapting to the green transition and the SDGs. Ongoing attention to optimizing and replacing where it makes sense is constantly measured and weighed in relation to resource consumption, economy, effect and integrity.
Going forward, KCSB also wants to be a green institution where sustainable goals help set the framework for a green working life and for a green cultural production.
We also want to communicate our role as an art and cultural institution in the green transition. We do this, among other things, by highlighting our initiatives, so that it becomes visible to guests that we have our eyes on green initiatives and improvements. In this way, we inspire guests and other institutions around us.
We are continuously working to change our habits and consumption as we know that the green transition requires effort and adaptation if new good habits are to take root.

Objectives:

- Reduce KCSB's climate footprint by continuously challenging our consumption at all levels and in all departments of KSCB.
- Implement and make KCSB's work with sustainability visible in the institution's overall strategies, business plans, budgets and activities.
- Seek out new technologies and knowledge within sustainable operations, and aim to implement these if it makes sense for the place.
- Continuously inform and educate staff on how certain habits and workflows can be improved, so that we achieve a more sustainable and responsible arts center.
- KCSB wants to work to be an attractive workplace, where there is a focus on a healthy and good work culture, where each employee feels safe and seen.
- Preserve, reuse and renovate buildings, park areas, etc., instead of discarding and building/establishing new ones.
- Relate to the world around us and think about what we leave behind for future generations.
